Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, drawn to a chimeric protein, classified in class 435, subclass 196.
- II. Claims 24-30, drawn to a nucleic acid, classified in class 536, subclass 23.2.
- III. Claims 31-49, drawn to a method for assaying sodium ions and a kit for assaying for sodium ions, classified in class 435, subclass 19.
- IV. Claims 50-72, drawn to a method for assaying for lithium ions and a kit for assaying for lithium ions, classified in class 435, subclass 19.

The inventions are distinct, each from the other because:

The products of Groups I and II are completely different chemical compounds and are patentably distinct. In addition, Group II involves cloning of the nucleic acid whereas Group I would read on the product as it is found in nature.

Groups III and IV are distinct because they are drawn to assaying for completely different substances. They do not involve the chimeric protein of Group I or the nucleic acid of Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
